

CHENG EN HSIEH

Product Manager | AI & ML Products, B2B SaaS, E-commerce

London, UK | Right to work in the UK | chengen.hsieh197@gmail.com | +44 7352 134838 | linkedin.com/in/markhsieh1997 | chennxie.com

PROFILE

Product Manager with six years turning ambiguous problems into measurable outcomes. I define the problem and success criteria, prioritise with data, ship the smallest viable solution, and let results decide what scales.

CORE SKILLS

AI & Data: LLM, Claude Code, Codex, agentic workflow automation, model evaluation, A/B testing, SQL, Google Analytics, SEO.

Product: Problem definition, product strategy, OKRs, roadmapping, discovery, PRDs and requirements, functional specs, user stories, user and market research, prioritisation, prototyping, UX, GTM strategy, Agile/Scrum, sprint planning, stakeholder management, cross-functional leadership and C-suite communication. Experience across digital media, fashion, e-commerce and SaaS.

Tools: Jira, Figma, Miro, Notion, Microsoft Office (Excel, Word, Powerpoint), Google Workspace (Docs, Sheets, Slides), Canva, Capcut, Premiere Pro, LINE OA, Slack, Telegram bot.

Languages: Mandarin (native), English (fluent).

PROFESSIONAL EXPERIENCE

Product Operations Specialist | Banyan Digital Limited

London, UK | Hybrid | Apr 2026 – Jul 2026

- Owned product and operational improvements for a content social platform with 127k+ monthly active users across the UK, Americas, and Asia, proactively identifying opportunities and working cross-functionally to improve workflows, operational efficiency, and product stability.
- Identified manual content production as the primary bottleneck to publishing velocity. I designed and deployed five automated workflows for content generation (videos, articles, images, covers), task distribution, publishing and accessible data dashboards, primarily using Claude Code with Codex. Doubled daily output per editor from 5 to 10 content units without increasing headcount.
- Used Google Analytics insights and SEO research to identify content and UX opportunities, optimising website layout, editorial direction, and keyword strategy to increase average active-user engagement time from 7 mins to 9 mins 30 secs.

Product Manager | Juksy Digital Media Co., Ltd.

Taipei, Taiwan | Hybrid | Apr 2024 – Aug 2025 | promoted to Product Manager within 9 months

- Took a B2B2C SaaS platform from zero to live product as sole PM, framing the commercial problem with the CEO before any spec existed, then scoping v1 against what the business could realistically monetise in year one rather than the full feature wish list.
- Ran discovery across finance, engineering, design, sales and pilot customers to convert competing asks into one prioritised roadmap, then owned the full delivery spec (PRDs, user stories, user flows, acceptance criteria) and drove weekly sprints in Jira with a cross-functional team of 10.
- Shipped an MVP to real users to test the market before committing further build, then iterated on live usage data and customer feedback, holding 100% on-time delivery across the roadmap.
- Identified editorial throughput as the core margin constraint and built an AI content pipeline (Google Trends ingestion & an internal model tuned to brand voice), lifting output from 7 to 20+ articles per editor per day with human review retained to protect quality.
- Architected payment-gateway and API integrations across Google Sheets, LINE Official Account, OpenAI and Anthropic, centralising enterprise tooling behind a single membership system and cutting manual operations 80%, from 5 hours per week to 1.

Product Specialist & Domain Expert | Rosetta.ai

Taipei, Taiwan | Hybrid | Feb 2021 – Apr 2024

- Owned the AI recommendation and personalisation product across three years in production for 1,000+ merchants, from the data layer through experimentation to rollout, working with engineering and data science to cut inference response time 43%.
- Reframed the growth question from model accuracy to commercial fit: segmented the client base to find where personalisation actually paid off, then concentrated rollout on merchants migrating from zero personalisation, a cohort averaging 660% annual revenue growth with the strongest accounts reaching 250% AOV and 350% CVR uplift.
- Built a 10,000+ attribute taxonomy and database from consumer research across the fashion industry, powering a product recognition model improved accuracy from 40% to 90%+ across all categories, benchmarking the ranking model.

Earlier experience: Project Manager, Freelance, Oct 2020-Mar 2023 ; Procurement Specialist, MAKALOT, Mar - Aug 2020.

SIDE PROJECTS

Credit-card rewards search — Comparison sites rank on headline rates and ignore FX fees, caps and registration rules. Ranks 30+ cards on net reward and picks the right one for a given spend. Live, sole build and operations.

Daily Brief — A Telegram bot where readers set topics and volume, then get a daily push they can retune any time. Split the pipeline into shared research plus per-reader write-up so cost stays flat as readers grow.

Travel Radar — Direct flights cost more and skip everything in between. Searches split-ticket combinations across a date window to cut fare and add stopover cities in the same trip.

EDUCATION, CERTIFICATIONS & LANGUAGES

BA Fashion Marketing, Fu Jen Catholic University, Taiwan | Sep 2015 – Jun 2019
